

WAVE CEPTOR
RADIO CONTROLLED

Now in its fourth generation, the Gravity Defier GW-3500 series is taking off as a digital/analogue watch featuring a dynamic, large design. The new G-SHOCK high-flyer, whose face plate stands out in the style of an aircraft instrument panel, combines the functionality of reliable solar power with Multiband 6 reception and ensures excellent readability even under high stresses.

Tough Movement

Tough Movement is the latest combination of **Wave Ceptor** and **Tough Solar** radio/solar technologies, which are embedded in the watch module's shock-resistant **hybrid construction** (made of durable resin and metal). What's more, all watches with Tough Movement are equipped with automatic time calibration. This intelligent function monitors the position of the **hands** every hour and **automatically adjusts** them whenever necessary.
